

Learning Pippa's 9 Times Table Trick

1. Hold your hands in front of you, palms upwards.
2. Number your fingers 1 to 10 as shown.
3. Select the finger you want to multiply 9 by (in this case let's say 4).
4. Now count how many fingers are to the left of the number 4 (3 fingers)
5. Now count how many fingers there are to the right of the number 4 (6 fingers)
6. Put the two numbers together, like so:

Thus 9×9 is solved by going to the finger 9. Then counting the fingers to the left (8) and then the fingers to the right (1).
